

## Starting Up Kali Linux on Virtualbox

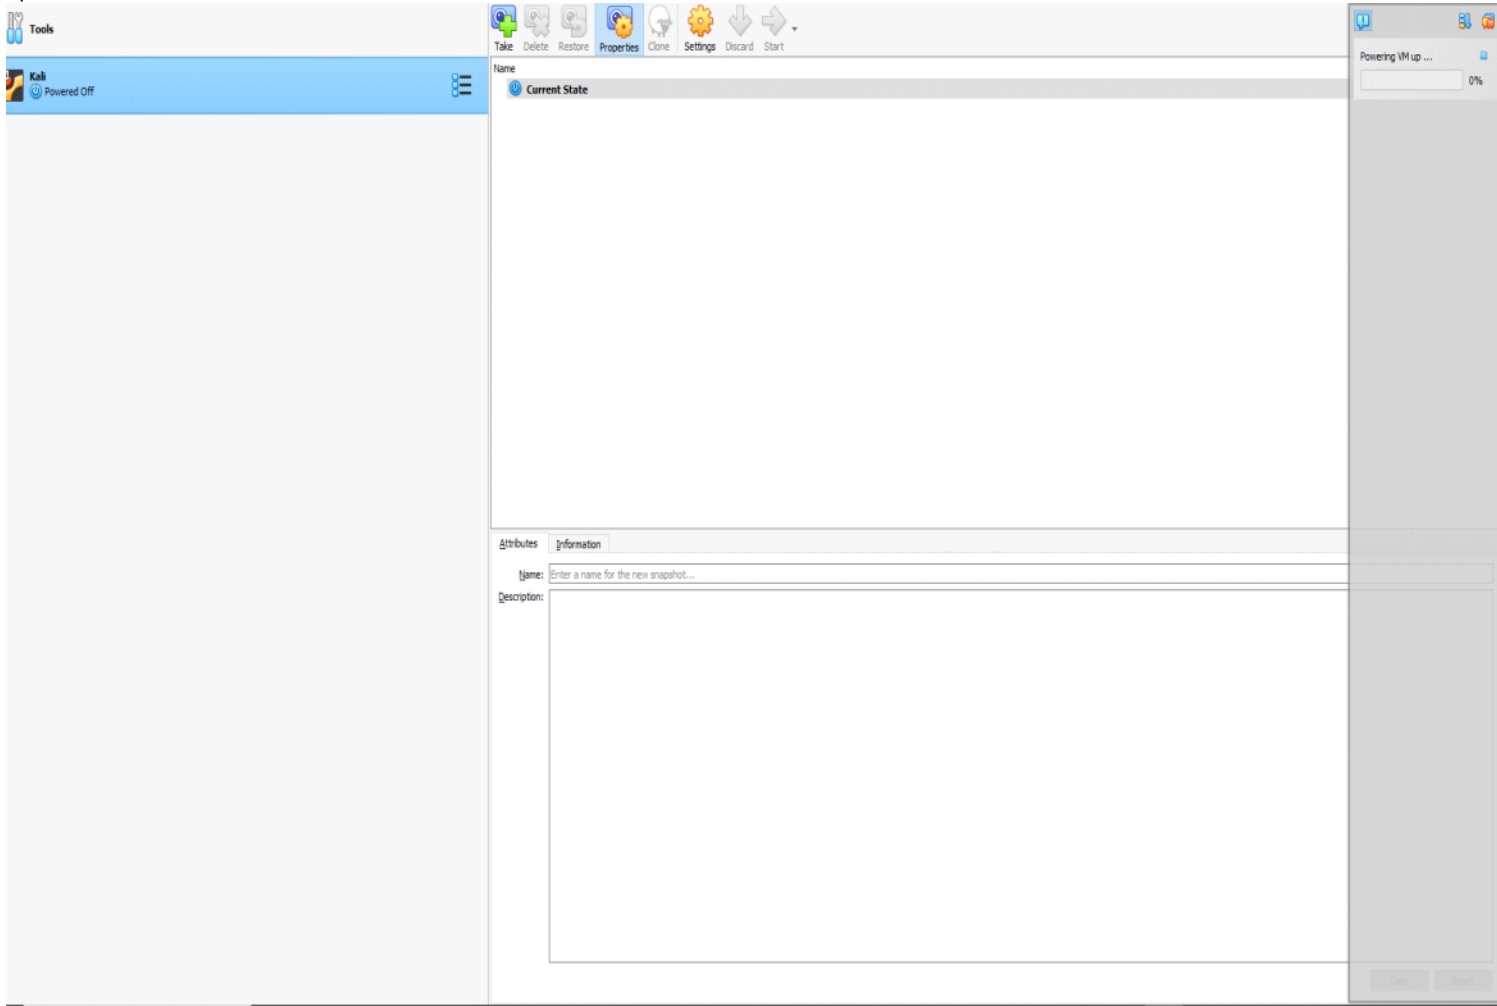

Here is a step by step guide on how to power up and install Kali Linux on your new VM using VirtualBox for the first time.

1. First, you can double click on the VM or right-click on the VM and then press start and normal start

2.

3. You will see on the side of your screen that it says powering up VM and let it run

4.

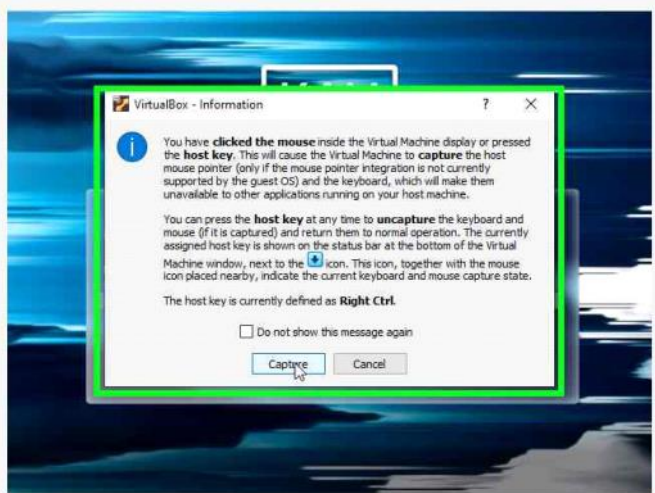

5. You will then be met with the installation screen as follows:

6.

7. Make sure you select GRAPHICAL INSTALL as that is for the ISO Image
8. If you see this warning, just click CAPTURE

9.

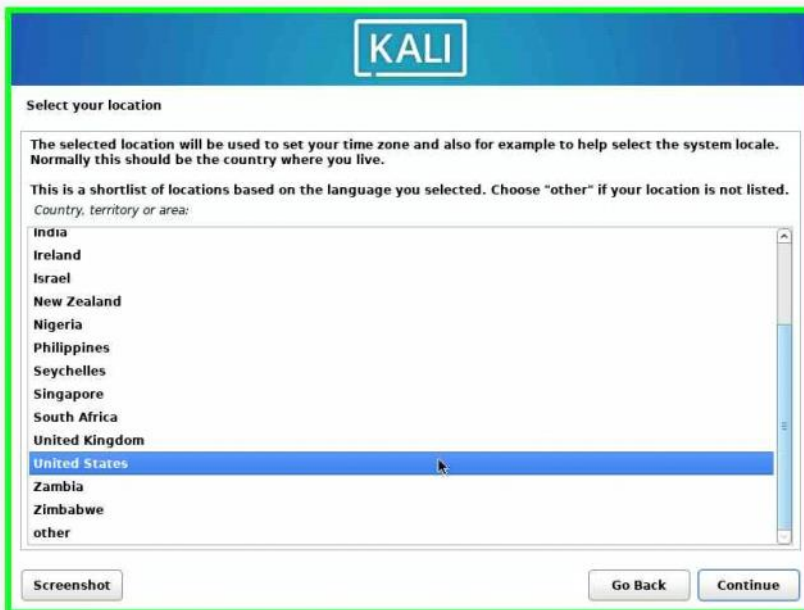

10. Select your Language

11.

12. Select your country

13.

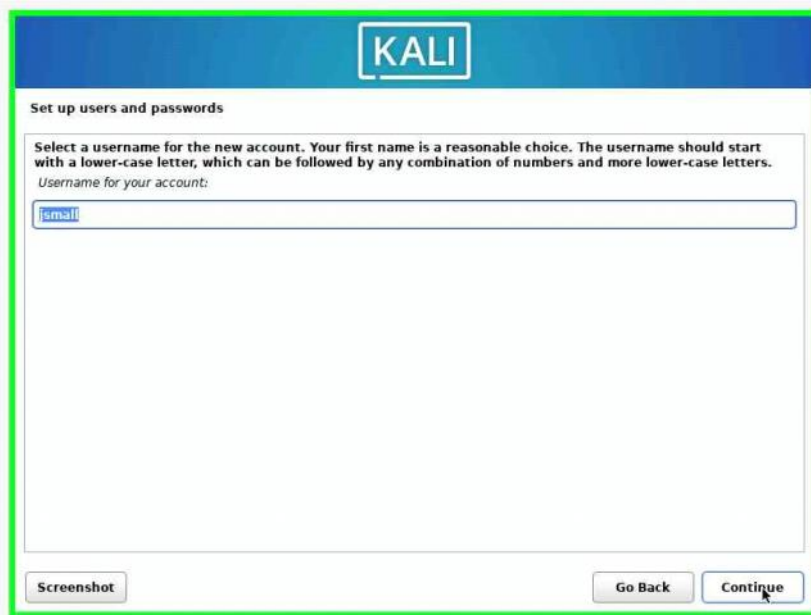

14. Select your keyboard layout

15.

16. It will then begin the installation process and let it run
17. You can then rename your system if you want, if you don't then click continue
18. Here is where you can create your own root account by naming it, then click continue

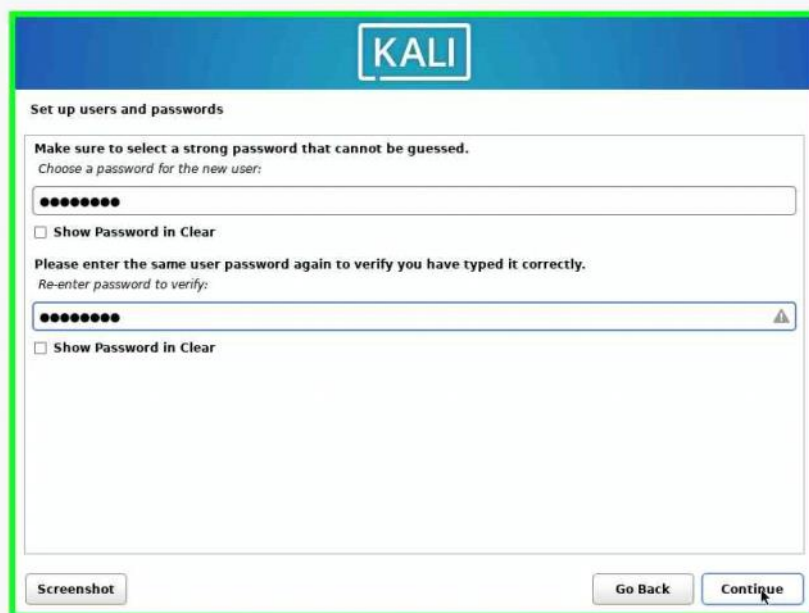

19.

The screenshot shows the 'Set up users and passwords' screen in the Kali Linux installer. At the top is a blue header with the 'KALI' logo. Below it, the title 'Set up users and passwords' is displayed. The instructions state: 'Select a username for the new account. Your first name is a reasonable choice. The username should start with a lower-case letter, which can be followed by any combination of numbers and more lower-case letters.' Below this, a text input field labeled 'Username for your account:' contains the text 'jsmall'. At the bottom of the window, there are three buttons: 'Screenshot' on the left, and 'Go Back' and 'Continue' on the right. A mouse cursor is hovering over the 'Continue' button.

20. Next, set up a password and then click Continue

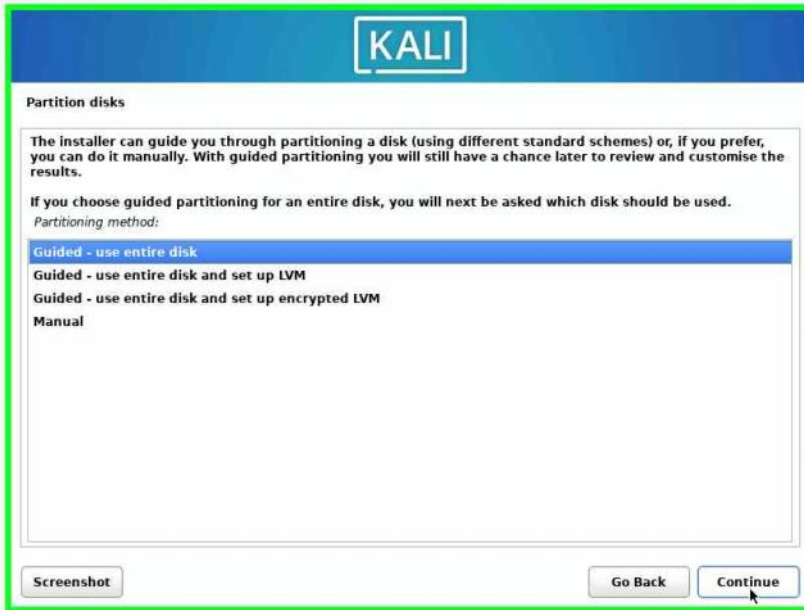

21.

The screenshot shows the 'Set up users and passwords' screen in the Kali Linux installer, now at the password setup stage. The header and title are the same as in the previous slide. The instructions state: 'Make sure to select a strong password that cannot be guessed. Choose a password for the new user:'. Below this is a password input field filled with dots. Underneath is a checkbox labeled 'Show Password in Clear'. The next instruction is: 'Please enter the same user password again to verify you have typed it correctly. Re-enter password to verify:'. Below this is another password input field, also filled with dots, with a small warning icon on the right. Below the second field is a checkbox labeled 'Show Password in Clear'. At the bottom, there are three buttons: 'Screenshot' on the left, and 'Go Back' and 'Continue' on the right. A mouse cursor is hovering over the 'Continue' button.

22. For the next few slides, just keep everything default and click Continue

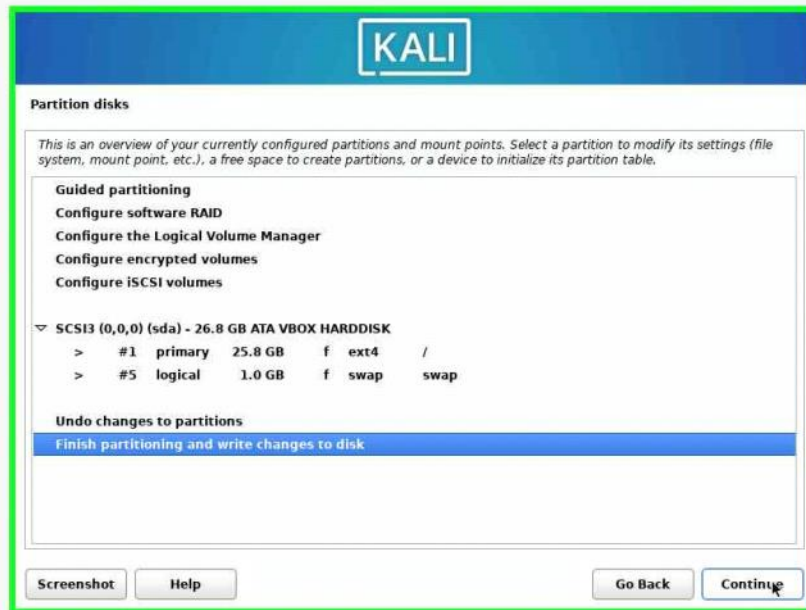

23.

24.

25.

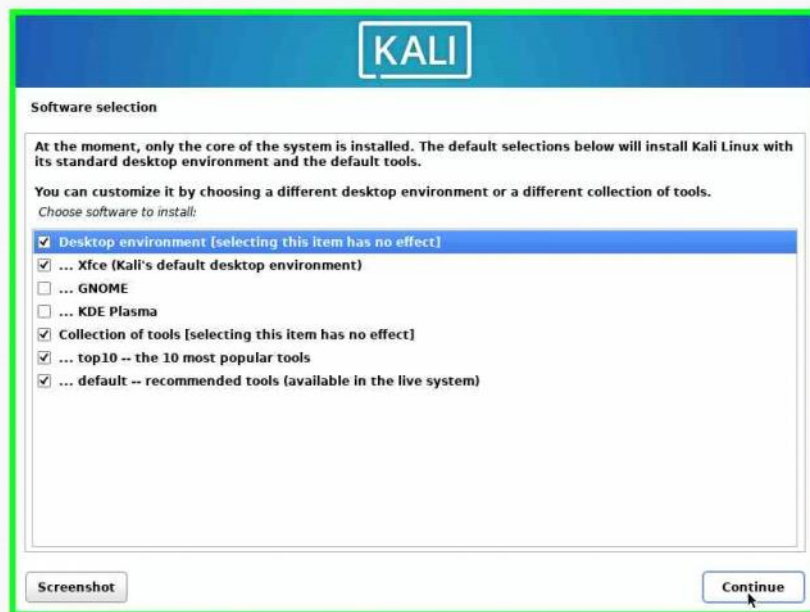

26. When you get to the part where it asks for partition changes, click YES and then Continue

27.

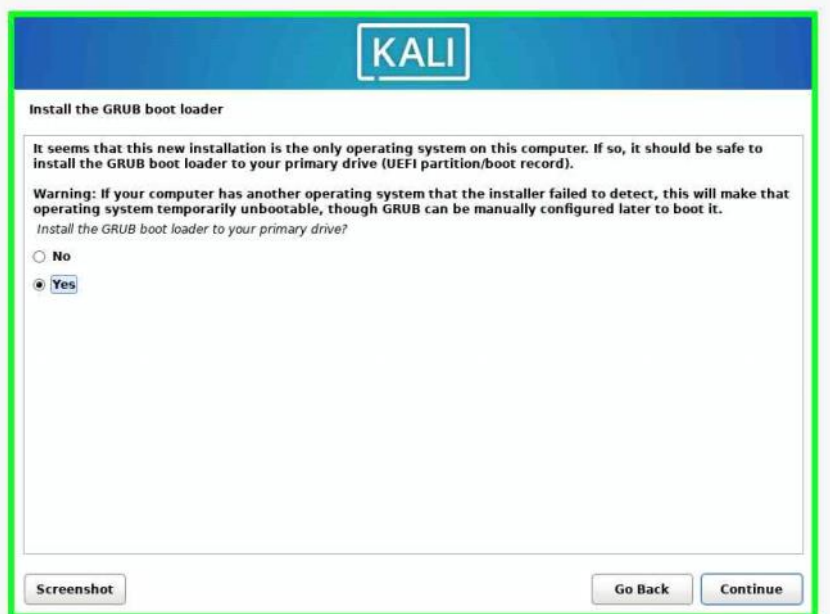

28. It will ask you about Software Selection, you can keep this default and click Continue

29.

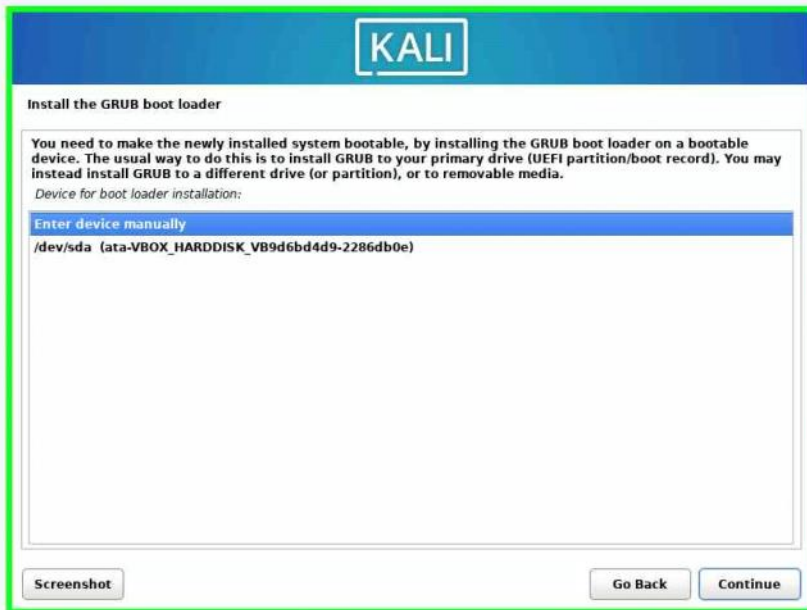

30. After installing more you will be met with this screen, make sure you select YES and then Continue

31.

32. Then select the disk for the boot loader and then select continue

33.

34. You will be prompted to restart the VM for it to complete installation, just click Continue and let it go through its process

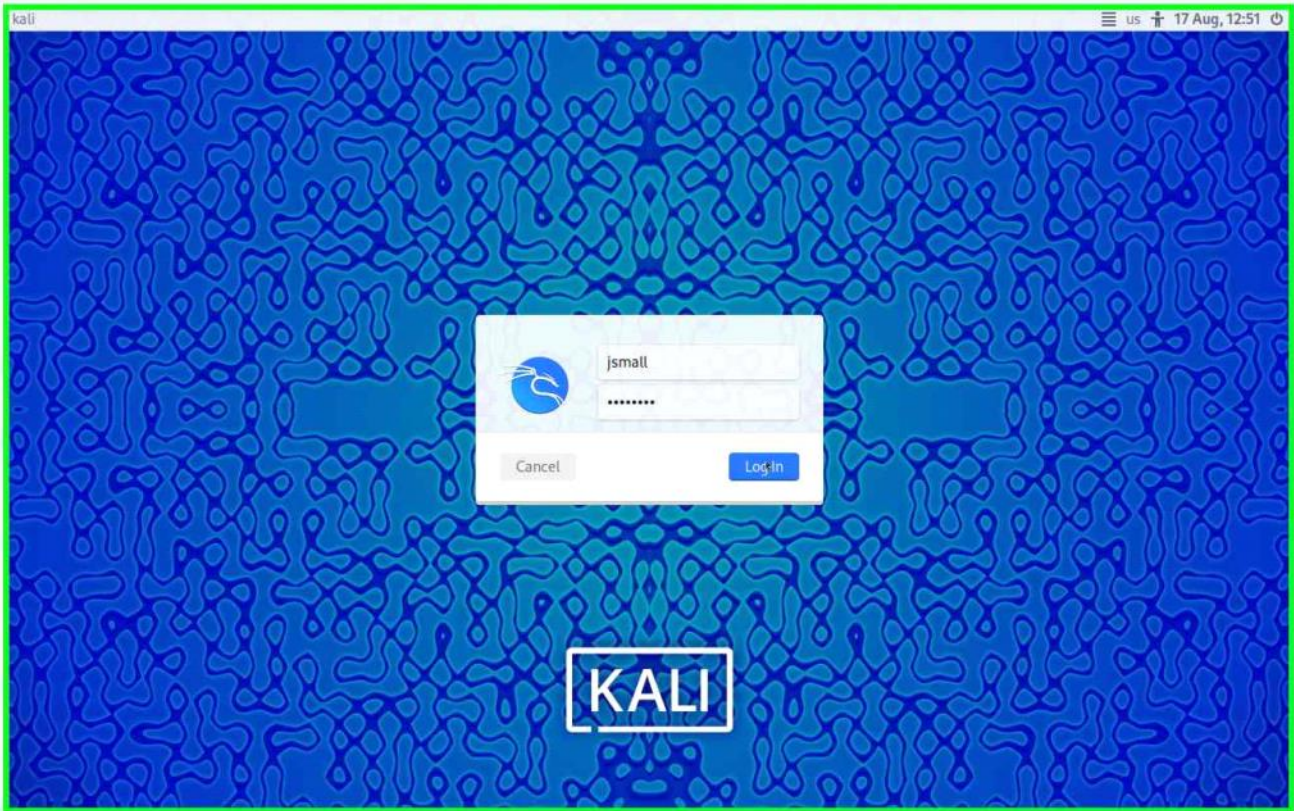

35.

36. Once it has rebooted, you will be met with a login screen. This is where you enter your username and password you create during the installation process.

37.

38. You have now successfully created your very own Kali Linux VM that is ready to be used! Have fun learning and playing around with it!

I hope you found these guides helpful and thank you for reading! Happy learning!
